### Description

Dome head is the most popular head style due to its low profile and clean, polished appearance. Aluminum Rivet/Aluminum Mandrel style rivets are constantly in high demand because they have such a low tensile and shear value.

Aluminum Rivet/Aluminum Mandrel Dome Head Rivets are most popular for industrial applications. Dome head is the most popular head style due to its low profile head diameter and clean, polished appearance. Aluminum Rivet/Aluminum Mandrel style rivets are in great demand because they have such a low tensile and shear value. The low profile head diameter is two times greater than the rivet body diameter and therefore, provides a strong bearing surface for nearly all necessary applications. It is recommended that Aluminum/Aluminum Dome Head Rivets ought to be used with materials containing the same mechanical and physical properties.

RABA3 2	3-2 ALUM/ALUMINUM POP RIVET (.031-.125)
RABA3 2BZ	3-2 ALUM/ALUM POP RIVET BRONZE ANODIZED (.031-.125 GRIP)
